GET /posts/1

The screenshot displays the Postman application interface. The main workspace shows a GET request to the URL `https://jsonplaceholder.typicode.com/posts/1`. The request is configured with the method `GET` and the environment set to `No environment`. The response is a `200 OK` status with a response time of `941 ms` and a body size of `1.27 KB`. The response body is a JSON object:

```
1 {
2   "userId": 1,
3   "id": 1,
4   "title": "sunt aut facere repellat provident occaecati exceptui optio reprehenderit",
5   "body": "quia et suscipit\nsuscipit recusandae consequuntur expedita et cum\nreprehenderit molestiae ut ut quas totam\nnostrum rerum est autem sunt rem eveniet architecto"
6 }
```

The left sidebar shows the `COLLECTIONS` panel with `ENVIRONMENTS`, `SPECS`, and `FLows` sections. The right sidebar contains the `Learning Postman Basics` section with a list of steps to get started:

1. Open or create a request — Enter a URL and hit Send
2. Inspect the response — See the status code, body, and headers
3. Save it to a collection — Keep your work organized
4. Add a test — Validate the response automatically
5. Use variables — Store your base URL in an environment

Below the list, there is a section titled `You already have the Get data request open — try sending it to see how responses look!` with buttons for `Send my open request`, `Add a test to my request`, `Create an environment with variables`, and `Explore collections`. The bottom status bar shows the system temperature as `30°C` and the date as `18-06-2025`.
